

ACCOUNTING

Decision Making & Financial Communications

Course Introduction:

Many managers and executives have heard that 'accounting is the language of business;' yet have not taken the opportunity to become basically literate. This course offers the accounting language in a structured process. Participants will gain access to the language in a variety of exercises that eventually link to the Annual Reports and to the budgets prepared and managed by the executives. No preparation is necessary except to bring an open mind and a budget document or other financial documents of interest.

By combining techniques, analysis, problems, and examples with real case studies the course provides delegates with key cost awareness and budgetary skills, which is essential in managing and controlling processes/projects in times of increasing global competition where the budgets are inextricably linked with both strategy formulation and cost analysis. This course not only presents the key financial tools generally used, but also explains the broader context of how and where they are applied to obtain meaningful answers. It provides a conceptual backdrop both for the financial/economic dimensions of systematic business management and for understanding the nature of financial statements, analyzing data, planning and controlling.

The course is targeted at providing a university-quality 'MBA' overview of accounting, decision making, and financial communications. Participants are expected to be high-potential learners seeking the next level of learning. Additional bibliographies, readings, and spreadsheets will be provided as takeaways.

Course Objectives:

This course will help you learn how to:

- Understand the content of and relationships between financial statements (income statement, balance sheet, and statement of cash flows)
- Understand how to use financial statements to evaluate the financial performance of an organization
- Understand discounted cash flow (DCF) techniques and their application to financial decision making
- Understand how profit margin, asset utilization, and financial leverage are used by managers to maximize the return to investors
- Understand the budgeting process, including performance evaluation
- Understand cost behavior and its impact on management decisions
- Understand the need for and the methods used to allocate overhead
- Communicate and to question financial information effectively

Who Should Attend?

Attendees are expected to be intellectually curious with a commitment to learning that requires significant personal effort. The nature of the course and of the materials dictate that interaction, commitment, and debate are the core components of the learning process. While no particular level of prior knowledge is needed, there is an assumption that the attendees are committed to immersing themselves in a learning situation.

Course Outline:

Accounting: An introduction

- What is accounting?
- What forms can accounting take
- Definition and importance of profit
- Decision scenarios explored
- Funding business operations
